Kaloyan Stefanov

Full-Stack, AI and Embedded Developer

About Me

Hi, I'm Kaloyan, a full-stack, AI and embedded systems developer. I became interested in programming three years ago, progressing from web and backend development to exploring Swift for mobile. I am now innovating in AI and embedded systems using LangChain, Python and STM32.

I am currently a student at the local foreign language school in Stara Zagora; however, over the past few years, I have devoted a significant portion of my free time to software development and gaining an understanding of hardware.

Education

"Romain Rolland"
Foreign Language School
Start: September 2021
Expected Graduation: May 2026

Interests / Hobbies

- Working with Micro Controllers
- Fixing Old Hardware
- Hanging out with friends
- Finding ways to improve my everyday life using technology
